

Branching:

1. Create a new branch **"GitNewBranch"**.

Ans: `git branch GitNewBranch`

2. List all the local and remote branches available in the current trunk. Observe the **"**"** mark which denote the current pointing branch.

Ans: `git branch -a`

3. Switch to the newly created branch. Add some files to it with some contents.

Ans: `git checkout GitNewBranch`

`echo "Adding branch content for testing" > feature.txt`

4. Commit the changes to the branch.

Ans: `git add feature.txt`

`git commit -m "Add feature.txt in GitNewBranch"`

5. Check the status with **"git status"** command.

Ans: `git status`

Merging:

1. Switch to the master

Ans: `git checkout master`

2. List out all the differences between trunk and branch. These provide the differences in command line interface.

Ans: Compare text and content modifications between the master branch and the source branch directly in the console.

3. List out all the visual differences between master and branch using **P4Merge tool**.

Ans: `git difftool master GitNewBranch`

4. Merge the source branch to the trunk.

Ans: `git merge GitNewBranch`

5. Observe the logging after merging using **"git log --oneline --graph --decorate"**

Ans: `git log --oneline --graph --decorate`

6. Delete the branch after merging with the trunk and observe the git status.

Ans: `git branch -d GitNewBranch`

`git status`
